Mentoring Programme

In tandem on the road to success!

The mentoring programme of the University of Applied Sciences of the Grisons is a relationship system between an experienced career professional and an inexperienced student. The mentors support the students with know-how, provide practical insights into the day-to-day business life, introduce them to networks and help them to understand the mechanisms and unwritten rules of the business world.

Mentoring partnership

Become part of our mentoring programme for bachelor and master students of the University of Applied Sciences of the Grisons. Students from all study courses can take part in their last year of study. Mentors are available for around 3–5 personal meetings over a period of approx. 9 months and accompany the mentees from just before they complete their studies with preparations for starting their professional careers, with career planning or in personal matters.

The mentees want

- insights into daily business life
- promotion of personal development
- to expand and join networks
- support in their career planning

The mentors value

- contact with an innovative university
- transfer of know-how
- passing on values and work ethics
- gaining coaching experience
